FROM ACADEMIC PRESS

A Unique New International Journal . . .

Regulatory Toxicology and Pharmacology

EDITORS: FREDERICK COULSTON AND ALBERT C. KOLBYE, JR.
MANAGING EDITOR: C. JELLEFF CARR

Here is a notable new journal that relates scientific and legal concepts concerning human health and the environment. *Regulatory Toxicology and Pharmacology* addresses the vital connection between the biological and chemical sciences and regulatory health laws.

New regulations and revisions of existing laws are based on the interpretation of biological and chemical knowledge, however imperfect the factual data. The articles will illustrate that, unfortunately, perceptions may or may not be based on secure facts and the result may be legislation that generates new concern for the public. The contributors will fully demonstrate the generation, evaluation, and interpretation of animal and human experimental data and report their effect on safety regulations.

Regulatory Toxicology and Pharmacology will report ideas and propositions developed in the writing and speeches of lawyers, scientists, business people, the public, and governmental officials. It will provide a medium for the international exchange of opinions. The journal will reflect the complex human interactions and facts of scientific and judicial decisions, with economic evaluations where necessary.

An important goal of *Regulatory Toxicology and Pharmacology* is the improvement of understanding between scientists and nonscientifically trained legislators and regulators. The editors seek to make this journal the forum for this needed increased communication.

The Editors state in Volume One: "We believe this new journal will be valuable if it includes not only what is being said and done in the United States of America, but also the thoughts and actions taken on an international scope. The Board of Editors has been selected with this in mind and they represent some of the best qualified people in the world to assist in evaluating papers for publication."

Audience: Administrators, Legislators, and Scientists involved with regulation, legislation, and development in the pharmaceutical, chemical, and related industries.

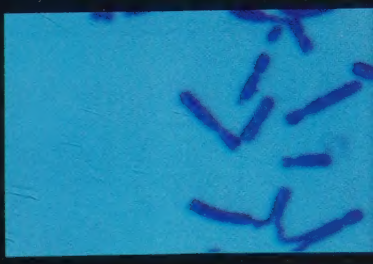
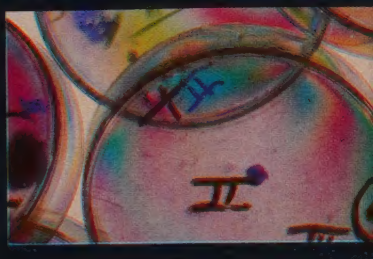
A leader in Genetic Toxicology has just become better.





Acquisition of the EG&G Mason Research Institute's Washington Laboratory enhances Microbiological Associates' professional expertise and lab capabilities.

With the addition of EG&G Mason's excellent staff and facilities, *Microbiological* reinforces its leadership role in Genetic Toxicology testing. With the EG&G Mason acquisition, *Microbiological's* great professional depth and existing broad technical capabilities are expanded. Now more than ever we are able to assess your individual needs and provide customized programs to meet your specific testing and research requirements.

Backed by over 30 years of biomedical research and testing experience, *Microbiological's* laboratories provide one of the most complete and sophisticated batteries of Genetic Toxicology tests available anywhere, including:

- Gene Mutations in *Salmonella/E. Coli*, L5178Y mouse lymphoma, CHO, BALB/3T3, and Drosophila.
- Primary DNA Damage in *E. Coli* Pol A^+/A^-, UDS in primary rat hepatocytes, and SCE in CHO and human lymphocytes.
- Chromosome Damage *in vivo* in rodent bone marrow and Drosophila; and *in vitro* in CHO, L5178Y, and human lymphocytes.
- Dominant Lethality in rodents and Drosophila.
- Cell Transformation in BALB/3T3 with and without activation and C3H $10T_{1/2}$.

Many of these test systems can be utilized to provide simultaneous assessment of multiple genotoxic endpoints for greater levels of testing confidence.

All tests are conducted under highly controlled conditions, using the most scientifically demanding protocols. Our Quality Assurance/Regulatory Affairs procedures are unsurpassed. Our scientists and technical staff, in conjunction with our Quality Assurance/Regulatory Affairs Department, insure that each assay is conducted in full compliance with all applicable GLP regulations. We invite you to review our FDA inspection reports to see for yourself the high quality we build into each of our assays. Please accept our open invitation to visit our facilities and meet with our staff to discuss your genetic toxicology needs.

At *Microbiological*, we know that we are only as good as our last test. For test results you can be sure about, come to the leader... our expansion has made us even better.

ANTIVIRAL CHEMOTHERAPY

Design of Inhibitors of Viral Functions

EDITED BY K. K. GAURI

This volume covers current chemical and immunological approaches to antiviral and anticancer chemotherapy. Several chapters delineate guidelines on the rational design of inhibitors of viral functions. Other chapters survey the present status of antiviral chemotherapy and discuss the modes of action that enable new strategies to evolve to yield more potent inhibitors. Chapters also discuss the resistance of herpes viruses to chemotherapy.

SECTION HEADINGS: Biology of Viruses. Design of Inhibitors. HSV Mutation. Pharmacological and Toxicological Aspects. Vaccines and Interferon.

1981, 384 pp., $29.00 ISBN: 0-12-277720-4

ADVANCES IN PHARMACOLOGY AND CHEMOTHERAPY, Volume 18

EDITED BY SILVIO GARATTINI, ABRAHAM GOLDIN, FRANK HAWKING, AND IRWIN J. KOPIN

CONSULTING EDITOR: ROBERT J. SCHNITZER

FROM THE REVIEWS OF PREVIOUS VOLUMES:

". . . will amply justify the time spent in its reading and should do much to dispel the belief that pharmacology is only concerned with the autonomic nervous system."

—B. A. Callingham in PHARMACEUTICAL JOURNAL

"The works . . . represent an extensive compilation of recent data by outstanding researchers in this area. They are generally scientifically excellent, the bibliographies are good, and the individual reports are clear, concise, and extremely well illustrated."

—H. E. Kaufman in CHEMOTHERAPY

CONTENTS: *M. J. Silver*, Mechanisms of Hemostasis and Therapy of Thrombosis: New Concepts Based on the Metabolism of Arachidonic Acid by Platelets and Endothelial Cells. *J. F. Ryley et al.*, Experimental Approaches to Antifungal Chemotherapy. *W. D. Wilson and R. L. Jones*, Intercalating Drugs: DNA Binding and Molecular Pharmacology. *E. J. Baines and J. A. McFadzean*, The Action of Metronidazole on Anaerobic Bacilli and Similar Organisms. *T. W. Kensler and D. A. Cooney*, Chemotherapeutic Inhibitors of the Enzymes of the *de Novo* Pyrimidine Pathway. References at the end of each chapter. Index.

1981, 376 pp., $45.00 ISBN: 0-12-032918-2

Future volumes in ADVANCES IN PHARMACOLOGY AND CHEMOTHERAPY are now available on a Continuation Order basis. Your Continuation Order authorizes us to ship and bill each future volume in the series automatically, immediately upon publication. This order will remain in effect until cancelled. Specify the volume number or title with which your order is to begin.

Send payment with order and save postage and handling.
Prices are in U. S. dollars and are subject to change without notice.

NUCLEOSIDES AND CANCER TREATMENT

Rational Approaches to Antimetabolite Selectivity and Modulation

EDITED BY M. H. N. TATTERSALL AND R. M. FOX

Proceedings of a Symposium held at the Ludwig Institute for Cancer Research (Sydney Branch) in October, 1980

CONTENTS: REGULATION OF NUCLEOTIDE LEVELS. *A. R. P. Paterson et al.*, Transport of Nucleosides in Animal Cells. *R. C. Jackson and R. J. Harkrader*, The Contributions of *de novo* and Salvage Pathways of Nucleotide Biosynthesis in Normal and Malignant Cells. *J. F. Henderson and D. Hunting*, Regulation of Deoxyribonucleoside Triphosphate Concentrations: The Role of Ribonucleotides and a Critique of Current Approaches. *Y. M. Rustum and H. D. Preisler*, Factors that may Determine Cellular Selectivity: Role of Ribonucleotide Pools and *de novo vs* Salvage Pathways. *A. A. Piper et al.*, Activities, at Different Stages of the Cell Cycle, of Enzymes of Pyrimidine and Purine Metabolism. *M. H. N. Tattersall et al.*, Plasma Nucleoside Levels. *A. R. P. Paterson et al.*, *In vivo* Studies with an Inhibitor of Nucleoside Transport, Nitrobenzylthioinosine 5′ -Monophosphate. *J. E. Seegmiller and R. C. Willis*, Selection of Mutant Cells Lines: Models of Selectivity. *J. A. Steinberg and G. B. Grindey*, Regulation of DNA Synthesis by Deoxyribonucleoside Triphosphates. *R. M. Fox and E. H. Tripp*, Relationship of Ecto-Triphosphatase Activity to Deoxynucleoside Sensitivity in Cultured Human Lymphocytes. *J. E. Seegmiller*, Human Defects in Purine Metabolism Responsible for Immunodeficiency Diseases. PURINE NUCLEOSIDE METABOLISM AND CYTOTOXICITY. *P. B. Rowe et al.*, Purine Synthesis in Human Lymphocytes. *M. S. Hershfield and N. M. Kredich*, Effects of Adenosine Deaminase Inhibition on Transmethylation. *R. M. Fox et al.*, Mechanisms of Deoxyadenosine Cytotoxicity in Cultured Leukaemic T Cells. *R. F. Kefford et al.*, Deoxyribonucleoside Triphosphate Pool Changes in Human Thymocytes Exposed to Deoxynucleosides. *J. F. Henderson and C. M. Smith*, Mechanisms of Deoxycoformycin Toxicity *in vivo*. *R. C. Jackson et al.*, Modulation of the Cytotoxicity of 6-Thioguanine, 6-Mercaptopurine and 5-Fluorouracil by Adenosine Pretreatment. CYTOTOXICITY OF PYRIMIDINE NUCLEOSIDES. *S. B. Howell*, Thymidine as a Chemotherapeutic Agent: Sensitivity of Human Solid Tumor and Marrow Progenitor Cells *in vitro*. *E. Cadman et al.*, The Modulation of 5-Fluorouracil Metabolism by Inhibitors of *de novo* Purine Synthesis. *A. A. Piper and R. M. Fox*, Differential Metabolism of Fluorouracil (FU) in Cultured Human T and B Lymphocyte Cell Lines: Modulation of Sensitivity by Purine Nucleosides and Bases. *A. A. Piper et al.*, Flow Microfluorimetric Analysis of Fluorouracil-Induced Cytotoxicity in Cultured Human Lymphocytes: Differentiation of RNA- and DNA-Dependent Cytotoxic Effects. *E. Cadman et al.*, The Modulation of Cytosine Arabinosid: Metabolism and Cytotoxicity by Altering Deoxythymidine Triphosphate Levels. *E. P. Kowall and G. B. Grindey*, The Concept of Metabolic Deinhibition: Biochemical Modulation of 1-β-D-Arabinofuranosylcytosine Activation. *R. C. Sawyer et al.*, Mechanism of Cytotoxicity in 5-Fluorouracil Chemotherapy of Two Murine Solid Tumors. *D. S. Martin et al.*, Biochemical Modulation of 5-Fluorouracil and Cytosine Arabinoside with Emphasis on Thymidine, Pala and 6-Methylmercaptopurine Riboside. METHOTREXATE CYTOTOXICITY. *I. W. Taylor and M. H. N. Tattersall*, Flow Cytometric Analysis of Methotrexate Treated Cells. *S. B. Howell and W. E. Wung*, Effect of Plasma Hypoxanthine on the Modulation of Methotrexate Toxicity by Thymidine. *D. J. Perez and M. H. N. Tattersall*, Antimetabolite Cytotoxicity: Studies of Tritiated Nucleoside Incorporation and Deoxyribonucleoside Triphosphate Levels. *S. B. Kaye*, Liposomes as Carriers of Antimetabolites. Index.

1981, $37.50 ISBN: 0-12-683820-8

Two Volumes in the Medicinal Chemistry Series . . .

DOXORUBICIN

Anticancer Antibiotics

BY FEDERICO ARCAMONE

This volume reviews the development of doxorubicin (Adriamycin) and its analogues, and summarizes the principles underlying their chemistry and pharmacological behavior. Chapters cover the discovery and development of this antitumor antibiotic, its total synthesis, and its biochemistry and pharmacology at the molecular level and in living systems. Also treated is the chemistry and pharmacology of doxorubicin analogues, including those obtained by semisynthesis, total synthesis, and by fermentation. The book provides chemical and pharmacological information in one source, and emphasizes the contribution of interdisciplinary approaches to new developments in cancer chemotherapy.

1981, 354 pp., $49.00 ISBN: 0-12-059280-0

ANTICANCER AGENTS BASED ON NATURAL PRODUCT MODELS

EDITED BY JOHN M. CASSADY AND JOHN D. DOUROS

This important book describes the most important types of anticancer drug classes developed from higher plants and microorganisms. It is subdivided into higher and lower plant products and categorized further by structural classes (important drug prototypes) such as bleomycins, anthracyclines, and others. In addition, a chapter also covers miscellaneous compounds and microbial transformation. The volume emphasizes lead and analog development. It develops structure-activity relationships and discusses molecular mechanisms of action, wherever appropriate.

1980, 520 pp., $49.50 ISBN: 0-12-163150-8

Keep informed of new directions in anticancer treatment with these recent titles...

Advance Announcement . . .

CALCULATOR PROGRAMMING FOR CHEMISTRY AND THE LIFE SCIENCES

BY FRANK H. CLARKE

This unique and practical work illustrates the utility of the programmable calculator as a tool for scientific research. Specific, detailed examples from select topics in chemistry and biology are provided to demonstrate the interrelationship between these scientific disciplines. The use of atomic coordinates as measures of the degree of correspondence between two molecules of different molecular structure is demonstrated, and a convenient method for determining partition coefficients is described in detail. Regression analysis is used to correlate the biological and physical properties of compounds. The practical programs are thoroughly described to allow their direct use in the laboratory. Although they are designed for the Texas Instrument TI-59 calculator, several of the programs are also provided in Reverse Polish Notation for Hewlett Packard calculators as well.

January 1982, in preparation ISBN: 0-12-175320-4

MOLECULAR ACTIONS AND TARGETS FOR CANCER CHEMOTHERAPEUTIC AGENTS

EDITED BY ALAN C. SARTORELLI, JOHN S. LAZO, AND JOSEPH R. BERTINO

A Volume in the BRISTOL-MYERS CANCER SYMPOSIA Series

Exploring topics of both basic and clinical interest, this informative book focuses on new approaches to anticancer treatment, and describes the important aspects of the molecular actions of anticancer drugs and possible new biochemical targets for therapeutic agents. Chapters, which are grouped according to drug mechanisms and target sites, discuss alkylating agents; antifolate antimetabolites; angiogenesis; metastasis; and differentiation. Additional topics include anticarcinogenesis; radiation sensitizers; nucleoside antimetabolites; membrane targets; and antibiotics. Each chapter reviews previously reported work and discusses recent unpublished research.

1981, 640 pp., $45.00 ISBN: 0-12-619280-4

NITROSOUREAS

Current Status and New Developments

EDITED BY ARCHIE W. PRESTAYKO, STANLEY T. CROOKE, LAURENCE H. BAKER, STEPHEN K. CARTER, AND PHILIP S. SCHEIN

ASSISTED BY NANCY A. ALDER

PARTIAL CONTENTS: PRECLINICAL STUDIES. The Development of the Nitrosoureas: A Study in Congener Synthesis. Combination Chemotherapy with Nitrosoureas plus Other Anticancer Drugs against Animal Tumors. EORTC Studies with Novel Nitrosoureas. Chemical Decomposition of Chloroethylnitrosoureas. Metabolism of Nitrosoureas. DNA Crosslinking and the Origin of Sensitivity to Chloroethylnitrosoureas. (Plus four additional chapters). CLINICAL STUDIES. Subacute and Chronic Toxicities Associated with Nitrosourea Therapy. The Toxicity of High-Dose BCNU with Autologous Marrow Support. Clinical Pharmacology of the Nitrosoureas. Nitrosoureas in the Therapy of Hodgkin's Disease. Hodgkin's Disease and Malignant Lymphomas. CCNU in Combination Chemotherapy Programs for Small-Cell Lung Cancer. POCC versus POCC/VAM Therapy for Small-Cell Anaplastic (Oat Cell) Lung Cancer. Nitrosourea-Containing Combinations in Small-Cell Lung Cancer. Nitrosourea-Containing Chemotherapy Regimens in the Treatment of Non-Small-Cell Lung Cancer. Chemotherapy of Recurrent Brain Tumors. Lipid-Soluble Nitrosoureas in the Management of Children with Primary and Recurrent Brain Tumors. Adjuvant Therapy of Brain Tumors with Nitrosoureas. Clinical Use of Nitrosoureas in Gastrointestinal Cancer. A Randomized Comparative Trial in Colorectal Cancer. Clinical Use of Nitrosoureas in Patients with Malignant Melanoma: A Review.
